SUMMARY

Computer Science (Honours) graduate of Universiti Teknologi PETRONAS (Second Class Upper), working as a Business Analyst on generative-AI and data solutions for enterprise clients across banking, insurance, logistics, telecommunications and SMEs. I translate business processes into clear functional requirements, identify edge cases and gaps where AI meets existing systems, and track issues to closure. Also an AI model evaluator, judging large language model responses against detailed quality rubrics. Hands-on builder across low-code and full-stack: a Power Apps approval platform at SLB, and web applications in active use.

PROFESSIONAL EXPERIENCE

Business Analyst Oct 2026 – Present
Axrail Sdn Bhd | Kuala Lumpur, Malaysia

- **Delivering AI and data solutions** for a client portfolio spanning banking, insurance, logistics, telecommunications and SMEs, translating each client's processes and data into clear functional requirements.
- **Analysing requirements for generative-AI document processing**, covering AI extraction and cross-checking, approval flows and maker-checker review; maintaining an issue and requirements tracker against the functional specification.
- **Identifying where AI meets existing systems**: human-intervention points, edge cases, audit-trail gaps and specification conflicts, raised with owners until resolved.
- **Supporting AI discovery workshops** that scope use cases by problem, current process, volumes, data and success measures to shortlist proofs of concept.

AI Model Evaluator (Freelance) Oct 2026 – Present
Handshake AI | Remote

- **Evaluating and comparing large language model responses** side by side against detailed rubrics for accuracy, instruction-following, helpfulness and safety, with a written rationale for each judgment.
- **Applying guidelines consistently** to ambiguous and borderline cases, producing preference data used to train and improve AI models.

Digital IT Operations Intern Jan 2025 – Aug 2025
SLB (Schlumberger) | Kemaman, Terengganu, Malaysia

- **Designed and built an IT Asset Disposal app end to end** on Microsoft Power Apps, SharePoint and Power Automate, replacing an Excel and email-chain e-waste process with one tracked, searchable platform for SLB Malaysia.
- **Engineered a two-level in-app approval workflow** (IT Manager, then Finance Controller) with role-based screens, reject-and-resubmit, and automated email notifications, improving traceability and audit readiness.
- **Modelled the data architecture to 3NF** across SharePoint lists (cases, items, locations, watchlists), and resolved Power Apps delegation limits using local collections.
- **Delivered a working prototype deployed internally**, built with SLB's GoDigital developers in Agile sprints; supported daily IT operations and the E-TCard check-in rollout.

PROJECTS

SMK Subang Data Dashboard – School Data Hub 2026
Side project, in use at a secondary school of ~150 teachers | github.com/7YMERA/dashboard-smksubang-portfolio

- **Replaced a page of links and a messy spreadsheet with one data hub**, syncing hourly from Google Sheets and flagging bad data at the source with its sheet and row.
- **Built privacy and accountability in from the start**: totals-only public view, row-level security, an append-only audit log and one-time admin invite links (Next.js, Express, Supabase, Apps Script).

TaskMatch – Skill-Based Task Matching (FYP and v2 rebuild) Jan 2026 – Present

UTP Final Year Project (FYP I: A-, FYP II: B+), now personal | taskmatch-umber.vercel.app

- **Built a recommendation system** that matches tasks to people with an explainable fit score out of 100 (skills, proven experience, availability, track record) whose weights tune themselves from real outcomes.
- **Rebuilt to production standard** across 13 documented releases: verified login on every endpoint, row-level security, roles and audit trail, GitHub/Jira import, and CI (Next.js, FastAPI, Supabase, pytest).

JumaatFinder · KakiLima · MyLokalEvent v2 2026

Side projects for Malaysian communities

- **JumaatFinder:** a 565-location dataset of masjid and surau scraped from official JAIS listings and geocoded, with a "leave by" time from JAKIM prayer times and rate-limited community reports.
- **KakiLima:** a four-language (EN, BM, 中文, தமிழ்), accessibility-first hub for reporting unsafe streets and public transport (kakilima-iota.vercel.app).
- **MyLokalEvent v2:** a bilingual local-events platform rebuilt from TEB3323 coursework (mylokalevent.vercel.app).

LEADERSHIP & ACTIVITIES

Head of Department, Academic & Welfare Jan 2024 – May 2024

UTP Computer & Information Sciences Student Society (UCISSS)

- **Led the Academic & Welfare department:** authored the action plan, launched a coding-competition committee, a tech guest-speaker series and the society's website, and organised a Tesla Experience Centre visit for 42 students.

Secretary, then Vice President May 2023 – Jan 2024

UTP Griffin Esports Club

- **Organised and hosted student esports tournaments** that generated revenue for the club, and grew membership by about 15%.

EDUCATION

Bachelor of Computer Science (Hons) – Second Class Upper May 2023 – Aug 2026

Universiti Teknologi PETRONAS | CGPA 3.23 | Conferred Nov 2026

- Major in Enterprise Systems, minor in Corporate Management. Industrial Project: A-.
- MARA Young Talent Development Programme (YTP) scholar, a merit-based national sponsorship.
- Relevant coursework: Enterprise Systems Development (A-), IT Audit & Risk Management (A-), Artificial Intelligence (A-), Business Intelligence, Data Science, Strategic Business Analytics.

Foundation in Computer Science May 2022 – May 2023

Universiti Teknologi PETRONAS | CGPA 3.04

Sijil Pelajaran Malaysia (SPM), Science Stream – 9A's 2021

SBP Integrasi Kuantan (INTEK)

SKILLS & CERTIFICATIONS

Business Analysis: requirements elicitation, functional specifications (FRD/FSD), process mapping, gap and issue tracking, AI use-case discovery

AI Evaluation: LLM output evaluation, side-by-side comparison, rubric-based judgment, edge-case analysis; Claude, ChatGPT, Gemini, Amazon Bedrock

Data & Low-Code: SQL, PostgreSQL / Supabase, data modelling (3NF), Microsoft Power BI, Excel, Power Apps, Power Automate, SharePoint

Programming: Python, TypeScript / JavaScript, Java; Next.js, React, FastAPI, REST APIs, Git, GitHub Actions, pytest

Certifications: Introduction to Amazon Bedrock (AWS, 2026); AWS Partner: Sales Accreditation (2026); AWS Academy Graduate – Cloud Foundations (2026) | verify badges

Languages: Malay and English (native), Indonesian (professional working), Mandarin and French (elementary)
